

SUMMARY

Robi Bayhaqi, 2005. The attempts of Natural Hazard and Disaster Rescue Team pre-incidents toward Society in Jombang District (A study of the Roles of Natural Hazard and Disaster Rescue Team in Jombang District, East Java). Dr. Sarwono, M.Si, Drs. Siswidiyanto, M.S., 95 pages + iv.

This study aims to regulate natural disaster before the actual disaster happened, as the anticipation of lack of government assistance on this problem. Therefore, the author wants to examine deeper how far the preparation of Natural Hazard and Disaster Rescue Team in Jombang District in its readiness to prepare on the pre-natural disaster happened as preventive means to minimize the impacts caused.

The focus of this study is to find out how the efforts of Natural Hazard and Disaster Team in preparing institutional aspects that well-prepared in the pre-occurrence as preventive steps in Jombang District citizens; to find out the Natural Hazard and Disaster Team in preparing the mitigation of natural disaster before the occurrence as preventive steps toward Jombang District citizens, and the efforts of this team to prepare its capacity as preventive steps toward the citizens.

This research is qualitative research. Data collecting techniques are interview, observation and documentation. The primary data in this study are The secretary of Primary Control Room of Rescue Team Jombang and other working units. The author uses Framing data analysis model to determine facts, which one is supported and the other is rejected, and determine whether the components correlated or not.

The findings of the study from Rescue Team institutional aspects indicate that various institutions engaged in the disaster recoveries seemed sluggish. From the mitigation of natural disaster, the Rescue Team did not realize the importance of alarm system in the natural disaster saving. They put an emphasis on communication aspect, but ignored the warning system seemed disregarded. From the supporting equipments, the rescue team could be categorized as good, yet the equipments are placed centrally on the district level, did not reach the sub-district level. This has caused the saving lives seemed sluggish. From the human resources, the rescue team tended to focus on external activities, such as distributing the knowledge without internal activities among members of rescue team, such as: special training toward first injured victims in the natural disaster.
