

## SUMMARY

Subekti Ad Pribadi, 2009, **Analysis Pro and Con over Management of Water Resources Ngesong at Punten Village Bumiaji Sub-district Batu City**, Promotor: Dr. Sarwono, M.Si, Co-Promotor: Dr. Imam Hanafi, M.Si, MS 148 pages + xviii

Research attempts to reveal the influence of water resource management policy which has lead to pro and contra. The pro and contra is between the government of Batu City as the pro party and the community around water resource as the contra party. The city government through its Local Planning and Development Agency has coordinated along with the Official of Cipta Karya and the Drink Water Local Company for the management of Ngesong Water Source at Punten Village, Bumiaji Subdistrict, to meet the demand of the community of Batu City at Ngaglik Village for drink water.

The communities around water resource, including Gunung Sari Village, Sumberejo Village and Ngaglik Village, strike by acting as the contra party who reject the management of Ngesong Water Source because the water stock has been decreased and the public facility and personal property are damaged when water pipelines are installed.

The government of Batu City approaches the communities by socializing the project to the communities around water resource and the agreement between the pro and the contra is successfully settled. The agreement includes the greening around water source, the repairing of public facilities passed by water pipelines, and the compensation to the communities who their personal properties passed by water pipelines. This agreement is mutually set to create a mutual cooperation between the pro and the contra in the management of Ngesong Water Source.
