Putri, Agmardyanti Dyah Umining, 2016. **Hubungan Dukungan Guru Terhadap Perilaku Cuci Tangan Pakai Sabun Anak Usia Sekolah Di SDN Sukorame 3 Kota Kediri**, Jurusan Ilmu Keperawatan – Fakultas Kedokteran, Universitas Brawijaya Malang. Pembimbing 1) Ns. Tony Suharsono, S.Kep., M.Kep, dan 2) Dr. Ahsan, S.Kp., M.Kes

Cuci tangan pakai sabun (CTPS) merupakan perilaku hidup sehat dasar yang mencegah kuman penyakit. Guru disekolah berperan untuk mendidik siswa sehingga mau menanamkan perilaku hidup sehat dalam kehidupan sehari-hari. Tujuan dari penelitian ini adalah untuk mengidentifikasi dukungan guru terhadap perilaku cuci tangan pakai sabun anak usia sekolah. Desain penelitian menggunakan *studi corelasional* pendekatan *cross sectional*. pengambilan sampel menggunakan teknik *stratified random sampling* dan dilanjutkan dengan teknik *simple random sampling* 148 anak kelas 1 sampai kelas 6. Hasil penelitian menunjukkan perilaku cuci tangan baik 129 siswa (87%) dan kurang 19 siswa (13%). Sedangkan dukungan guru baik 106 siswa (72%) dan kurang 42 siswa (28%). Uji statistik menggunakan *Rank Spearmen* menunjukkan adanya hubungan signifikansi dengan $p\text{ value } (0,000) < (0,005)$. Kesimpulan bahwa terdapat hubungan antara dukungan guru terhadap perilaku cuci tangan pakai sabun anak usia sekolah. Diharapkan semua siswa mampu memahami pentingnya perilaku cuci tangan pakai sabun sehingga dapat meningkatkan perilaku cuci tangan anak agar terhindar dari kuman penyakit.

Kata Kunci : Perilaku Cuci Tangan, Dukungan Guru, Anak Usia Sekolah

ABSTRACT

Putri, Agmardyanti Dyah Umining, 2016. **The Correlation of Teacher's motivation to the washing hand behavior by using soap for the elementary students of Sukorame 3 Kediri City.** Departement of Nursing, Medical Faculty. Brawijaya university Malang. Adviser 1) Ns.Tony Suharsono S.Kep., M.Kep. 2) Dr. Ahsan, S.Kp., M.Kes.

Washing hand using soap is the healthy life's behavior is proved to overcome the spreading of germs. Teacher's role and motivation are important to educate their students how to keep their own health especially the habit of washing hand at school. The purpose of this research is to identify the teacher's motivation to the washing hand behavior by using soap for the school age kids. The research design used correlational study. Croos sectional approach. Sampling taking used stratified random technique and continued simple random sampling technique. The sampling are 148 student from the first to the sixth grade students. The result of the research shows 129 students good at washing hand (87%) and 19 students (13%) are less at washing hand. Meanwhile at teachers motivation shows good at 106 students (72%) and less for 42 student (28%). The statistic test which used Rank Spearmen shows there i significant correlation among p value (0,000). The conclusion is that there is correlation among the teachers motivation to the washing hand behavior by using soap for the school age kids. it is expected that all student are able to understand the importance of handwashing with soap so as to improve the behavior of children hand washing to avoid germs.
