

Lampiran 1. Denah Percobaan

## Lampiran 2. Pehitungan Jumlah Tanah per Polybag

Lebar bedengan di lapangan = 30 cm

Jarak antar tanaman dalam bedengan = 20 cm

Tebal bedengan = 30 cm

BI = 0.712

Volume tanah / Polybag Total =  $p \times l \times t \times BI$

$$= 20 \times 30 \times 30 \times 0.712$$

$$= 12816 \text{ g}$$

$$= 12.816 \text{ kg}$$

\*Volume tanah awal = 10 kg

\*Volume tanah bumbunan 1 = 1.5 kg

\*Volume tanah bumbunan 2 = 1.316 kg

Sehingga volume tanah total yang digunakan dalam polybag adalah 12.816 kg.

## Lampiran 3. Perhitungan Kebutuhan Pupuk Kandang

Dosis anjuran pupuk kandang ayam untuk tanaman kentang 20 ton/ha

$$\text{Jarak tanam} = 70 \times 25 \text{ cm} = 1500 \text{ cm}^2 = 0,15 \text{ m}^2$$

$$\text{Populasi} = \frac{1 \text{ ha}}{\text{jarak tanam}} = \frac{10.000 \text{ m}^2}{0,15 \text{ m}^2} = 66667 \text{ tanaman}$$

$$\text{Kebutuhan pupuk} = \frac{\text{dosis anjuran}}{\text{populasi}} = \frac{20000 \text{ kg}}{66667}$$

$$= \frac{20.000.000 \text{ g}}{66667}$$

$$= 299,998 \text{ g/polybag}$$

## Lampiran 4. Hasil Analisis Dasar Tanah

No.	Analisa	Metode	Nilai	Kategori
1.	Tekstur <ul style="list-style-type: none"> <li>• Pasir (%)</li> <li>• Debu (%)</li> <li>• Liat (%)</li> </ul>	Pipet	49.255 43.978 6.767	Lempung Berdebu
2.	Berat isi rata-rata (gr/cm <sup>3</sup> ) <ul style="list-style-type: none"> <li>a. BI.1 (gr/cm<sup>3</sup>)</li> <li>b. BI.2 (gr/cm<sup>3</sup>)</li> <li>c. BI.3 (gr/cm<sup>3</sup>)</li> </ul>	Ring Sampel	0.712 0.722 0.705 0.710
