Environment responsibility is the role of an organization in improving the quality of the environment that are beneficial to the organization itself and the stakeholders. environmental accounting shows the real cost of business input and process, also ensures that there is cost efficiency. Hospital is one of form of industry which give the service of the society's health and potentially to produce very dangerous waste.

The aim of this research is to find out the implementation of social and responsibility accounting of RSUD Dr. Moewardi Surakarta towards the environment related with waste treatment.

This research shows that RSUD Dr. Moewardi Surakarta is not already reported the environment accounting fully, if we see from the report that already made by management. There is no special reports that reveal about environmental cost or activities from this hospital. But, RSUD Dr. Moewardi Surakarta is already responsible towards the environment related with the waste treatment that have been done effectively.
