

LAMPIRAN 1
 UJI NORMALITAS DAN HOMOGENITAS

1. SGOT

One-Sample Kolmogorov-Smirnov Test

		SGOT
N		20
Normal Parameters ^a	Mean	141.75
	Std. Deviation	32.743
Most Extreme Differences	Absolute	.190
	Positive	.190
	Negative	-.116
Kolmogorov-Smirnov Z		.850
Asymp. Sig. (2-tailed)		.465

Nilai signifikansi = 0,465 ($p > 0,05$) yang berarti bahwa distribusi data normal.

Test of Homogeneity of Variances

SGOT

Levene Statistic	df1	df2	Sig.
2.974	4	15	.054

Nilai signifikansi = 0,054 ($p > 0,05$) yang berarti data mempunyai ragam (varians) yang relatif homogen.

2. SGPT

One-Sample Kolmogorov-Smirnov Test

		SGPT
N		20
Normal Parameters ^a	Mean	93.65
	Std. Deviation	42.995
Most Extreme Differences	Absolute	.178
	Positive	.178
	Negative	-.124
Kolmogorov-Smirnov Z		.797
Asymp. Sig. (2-tailed)		.549

Nilai signifikansi = 0,549 ($p > 0,05$) yang berarti bahwa distribusi data normal.

Test of Homogeneity of Variances

SGPT			
Levene Statistic	df1	df2	Sig.
1.605	4	15	.225

Nilai signifikansi = 0,225 ($p > 0,05$) yang berarti data mempunyai ragam (varians) yang relatif homogen.

3. Protein Total

One-Sample Kolmogorov-Smirnov Test

		Total_Protein
N		20
Normal Parameters ^a	Mean	6.1415
	Std. Deviation	.35754
Most Extreme Differences	Absolute	.204
	Positive	.204
	Negative	-.118
Kolmogorov-Smirnov Z		.912
Asymp. Sig. (2-tailed)		.377

Nilai signifikansi = 0,377 ($p > 0,05$) yang berarti bahwa distribusi data normal.

Test of Homogeneity of Variances

Total_Protein			
Levene Statistic	df1	df2	Sig.
.765	4	15	.564

Nilai signifikansi = 0,564 ($p > 0,05$) yang berarti data mempunyai ragam (varians) yang relatif homogen.

4. Bilirubin Total

One-Sample Kolmogorov-Smirnov Test

		Bilirubin_Total
N		20
Normal Parameters ^a	Mean	.1295
	Std. Deviation	.02481
Most Extreme Differences	Absolute	.192
	Positive	.192
	Negative	-.116
Kolmogorov-Smirnov Z		.858
Asymp. Sig. (2-tailed)		.453

Nilai signifikansi = 0,453 ($p > 0,05$) yang berarti bahwa distribusi data normal.

Test of Homogeneity of Variances

Bilirubin_Total			
Levene Statistic	df1	df2	Sig.
2.712	4	15	.070

Nilai signifikansi = 0,070 ($p > 0,05$) yang berarti data mempunyai ragam (varians) yang relatif homogen.

LAMPIRAN 2

UJI ANOVA

1. SGOT

ANOVA					
SGOT					
	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	16388.500	4	4097.125	15.437	.000
Within Groups	3981.250	15	265.417		
Total	20369.750	19			

Nilai signifikansi = 0,000 ($p < 0,05$) yang berarti bahwa ada perbedaan signifikan pada perubahan dosis ekstrak terhadap kadar SGOT.

Multiple Comparisons

SGOT
Tukey HSD

(I) Kelompok	(J) Kelompok	Mean Difference (I-J)	Std. Error	Sig.	95% Confidence Interval	
					Lower Bound	Upper Bound
kontrol negatif	kontrol positif	-62.000*	11.520	.001	-97.57	-26.43
	P1	-33.750	11.520	.067	-69.32	1.82
	P2	.500	11.520	1.000	-35.07	36.07
	P3	17.750	11.520	.554	-17.82	53.32
kontrol positif	kontrol negatif	62.000*	11.520	.001	26.43	97.57
	P1	28.250	11.520	.155	-7.32	63.82
	P2	62.500*	11.520	.001	26.93	98.07
	P3	79.750*	11.520	.000	44.18	115.32
P1	kontrol negatif	33.750	11.520	.067	-1.82	69.32
	kontrol positif	-28.250	11.520	.155	-63.82	7.32
	P2	34.250	11.520	.062	-1.32	69.82
	P3	51.500*	11.520	.003	15.93	87.07
P2	kontrol negatif	-.500	11.520	1.000	-36.07	35.07
	kontrol positif	-62.500*	11.520	.001	-98.07	-26.93
	P1	-34.250	11.520	.062	-69.82	1.32
	P3	17.250	11.520	.579	-18.32	52.82
P3	kontrol negatif	-17.750	11.520	.554	-53.32	17.82
	kontrol positif	-79.750*	11.520	.000	-115.32	-44.18
	P1	-51.500*	11.520	.003	-87.07	-15.93
	P2	-17.250	11.520	.579	-52.82	18.32

*. The mean difference is significant at the 0.05 level.

Dengan uji Post Hoc Tukey dapat diketahui perbedaan antar tiap pasangan kelompok perlakuan (dosis dan kadar SGOT).

Homogeneous Subsets

SGOT

Tukey HSD

NO : 212/LP3HP/25/I/2012

Yang bertanda tangan di bawah ini :

Nama : Dr. drh. Pudji Astuti, MP.
NIP : 19601012 198703 2 001
Jabatan : Kabid Unit Pra Klinik – LPPT UGM.

Menerangkan bahwa ;

Nama : Muhammad Yardlan Mahardika
NIM : 105070104121002
Instansi : Pendidikan dokter 2010
Fakultas Kedokteran UNIBRAW Malang

Pada bulan Januari 2012 membeli Tikus putih (*Rattus norvegicus* L.) Jantan galur *Wistar* usia 2 1/2 bulan sejumlah 55 (Lima puluh Lima) Ekor dari Unit Pra- Klinik LPPT Universitas Gadjah Mada

Hewan tersebut dalam keadaan masih Fertile dan tidak terinfeksi penyakit sehingga tidak menularkan penyakit.

Menurut keterangan dari yang bersangkutan hewan tersebut akan dibawa ke Fakultas Kedokteran UNIBRAW Malang dan akan digunakan sebagai hewan percobaan Penelitian.

Demikian surat keterangan ini dibuat, agar dapat dipergunakan sebagaimana mestinya.

Atas kerjasama yang baik diucapkan terima kasih.

Sertifikat Penghargaan *Setara Emas* dalam acara Pekan Ilmiah Mahasiswa Nasional (PIMNAS) Bidang PKM-Penelitian tahun 2012

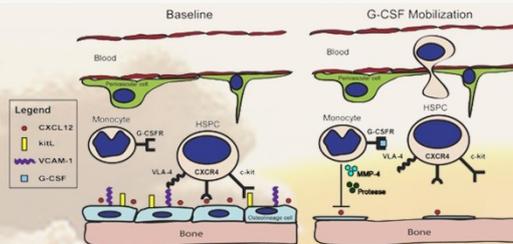

REGENERATIVE THERAPY INNOVATION FOR LIVER CIRRHOSIS BY MOBILIZATION OF HEMATOPOIETIC STEM CELLS AS AN ALTERNATIVE FOR TRANSPLANTATION BY OATS (*Avena sativa* L.)

Vardian Mahardika, Afyif Kaysa W., Mirza Zaka P., Dewangga P., Andhika Rahmidewi, Hikmawan, MD
Faculty of Medicine, Brawijaya University

INTRODUCTION

Liver cirrhosis is a chronic inflammation that involves many factors. The continuous result of inflammation is associated with dying liver cells that causes fibrous tissues to form. As a result, the liver is not functioning properly, and eventually liver will die. Liver Transplantation as the best therapy now still has a high failure rate. Regenerative therapy is a potential therapy to be developed. Oats contains beta-glucan that can increase the level of G-CSF (Granulocyte Colony Stimulating Factor) in the body. Elevated levels of G-CSF would increase the release of hematopoietic stem cells into the body circulation. Hematopoietic stem cells will be mobilized into the liver and regenerate liver cells that have been damaged.

Releasing Process of Hematopoietic Stem Cell from Bone Marrow into Circulation
(Picture taken from <http://hematology.wustl.edu/faculty/linklinkbio.html> with modification)

Liver Cirrhosis

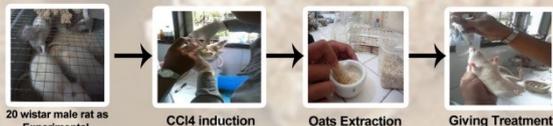

BACKGROUND

Mortality rate of liver cirrhosis in Indonesia is 13,9 % over the world (WHO, 2004). Liver transplant still become the most preferred therapy but the mortality rate still high (Lipshutz, 2007).

OBJECTIVES

Determine the effects of oats in restoring anatomical structures and physiological functions of the liver cirrhosis.

MATERIAL & METHODS

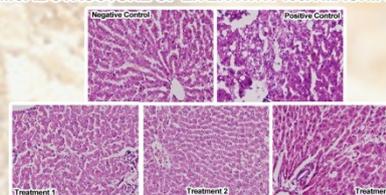

Blood and organ sampling

Group	Treatment
Negative Control	Negative for any treatment
Positive Control	CCl4 induction without oats as diet
Treatment 1	CCl4 induction+90 mg/kgBW of oats
Treatment 2	CCl4 induction+180 mg/kgBW of oats
Treatment 3	CCl4 induction+360 mg/kgBW of oats

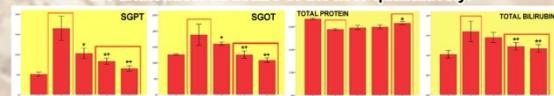

This study is true experimental research with posttest only controlled group design. 20 wistar male rats as experimental animals were divided into 5 groups : negative control, positive control, Treatment 1 (CCL4+Oats extraction 90mg/kgBB), Treatment 2 (CCL4+Oats extraction 180mg/kgBB), treatment 3 (CCL4+Oats extraction 360mg/kgBB). CCl4 to induce hepatic damage was injected 1 ml / kg body weight for 8 weeks in subcutaneous . Oats are given daily from week 3 to week 8.

RESULTS :

ANATOMICAL STRUCTURE OF LIVER WITH 400X MAGNIFICATION (HE)

The results showed that administration of oats is able to restore the anatomical structure of the liver qualitatively.

NOTE : 1 = Negative Control ; 2 = Positive Control ; 3 = Treatment 1 (Oats 90mg/KgBW); 4 = Treatment 2 (Oats 180mg/KgBW) ; 5 = Treatment 3 (Oats 360mg/KgBW)

*) Significantly Different with Positive Control ; *) Not Significantly Different with Negative Control

Statistical Analysis using One Way Anova shows that oats could reduce the levels of SGOT, SGPT, and bilirubin significantly ($p < 0,05$). Oats are able to increase the total protein levels significantly ($p < 0,05$). There is a strong and significant correlation between the provision of oats with reduced levels of SGOT levels ($R = -0,879$), SGPT levels ($R = -0,861$), bilirubin levels ($R = -0,675$) and elevated levels of total protein ($R = 0,746$).

CONCLUSION :

Oats can increase the mobilization of hematopoietic stem cells to regenerate liver cirrhosis, indicated by the return of anatomical structures and physiological functions of the liver (decreased levels of SGOT, SGPT, total bilirubin, and increased levels of total protein).

Thus, oats can become a regenerative therapy innovation for liver cirrhosis by mobilization of hematopoietic stem cells as an alternative for liver transplantation
