## ACKNOWLEDGEMENT

Alhamdulillahirobil 'alamin. Praise to Allah SWT that has given me this opportunity to study and to finish this thesis. Actually, the learning experience in Brawijaya University is a priceless gift to me. I would not be here without the help and support from long list of people that have been with me from the start. Likewise, I remember a nice quote to express my thankful feelings, “...*If I have seen further than others, It is by standing upon shoulders of giants*” (Sir Isaac Newton).

Words cannot express my debt to my thesis committee, Mr. Dr. M.R. Khairul Muluk, S.Sos, M.Si and Mr. Sujarwoto, S.IP, MAP, Ph.D for their supports, valuable insights, and patiences in supervising me for this thesis. I also would like to thank to all my examiners of proposal thesis commitee, Mr. Prof. Dr. Bambang Supriyono, MS, Dean of Public Administration Faculty, and Mr. Dr. Rer. Pol. Romy Hermawan, S.Sos, MAP, for their valuable suggestion in adding literature review to my thesis proposal. All my great thanks in advance, I also propose for the lecturers in Master Linkage Program in Faculty of Administrative Science, Brawijaya University for the valuable science that improve my knowledge. Furthermore, my gratitude goes to National Development Planning Board and Central Board of Statistics (BPS) which give me a permit to follow this program.

Moreover, I would like to express my gratefulness to all Batch 9 Linkage Fellows (or Batch 2 in Professional Human Resource Development IV (PHRD IV) Fellowship Program) in Magister Administrative Science Brawijaya University that have been coloring my days in Malang.

Finally, I would like to show my love to my parents for their endless love and prayer. I owe much to my lovely wife and my two daughters for their fantastic endorsement. This thesis is dedicated to you all.

Malang, August 2016

Aris Rusyiana

## ABSTRACT

This study examines the linkage between decentralization and communal conflict in Indonesia (2008-2014) and identifying other determinants of communal conflict. Data comes from respectively the 2008, 2011, and 2014 Village Potential Census (PODES) and official statistics which consists of communal conflict information across all Indonesia's villages within regencies (N villages = 75.000, N regencies = 510). This study frames the concept of the linkage between three types decentralization and communal conflict in several ways. First, communal conflict varied within regencies and villages key factors. In regencies level, communal conflict associates with three types of decentralization as measured by Schneider (2003), e.g: Administrative Decentralization, Fiscal Decentralization, and Political Decentralization. In other case, in regency level, We operationalize other measures, e.g: Ethnic Diversity, Gini Ratio, Poverty, and Gross Regional Domestic Product (GRDP). While in village level, We examines the variability of measures, e.g: Community Group Social Capital, Local Traditional Leaders, Slum Areas, Converted Land, Mining Areas, Television, Daily Crimes, Drought, Mountainous, Valley, and Seaside Areas.

This study uses two-level logistic regressions to adress multilevel heterogeneity and separating variances in communal conflict between characteristics of village level and regency level.

Geographical distributions of communal conflict (2008-2014) and three types of decentralization are presented respectively as follows: (1) The highest incidence shows at regencies accross Maluku, Sulawesi, Papua Provinces, and West Java Provinces; (2) the lowest density of administrative decentralization were at regencies across East Nusa Tenggara, Central Kalimantan, and Papua Provinces (< 50 % that villages heads attained high education); (3) The highest density of fiscal decentralization, which is measured by the number in millions rupiah of IDR spending in order and peace function key, shows at regencies across Riau, Kalimantan Barat, and Papua Provinces (ranged from 30.000 Millions IDR to 60.000 Millions IDR) ; and (4) Regencies and Cities Across Lampung, Kalimantan Barat, NTT, Sulawesi, and Papua Provinces experiences less mature democracy (the age of first mayor election ranged from 0 to 3 year old) than other provinces.

Results from multilevel regressions show some fruitful findings such follow: (1) administrative decentralization could decrease communal conflict in Indonesia, (2) However, fiscal decentralization and political decentralization seem not to be significant factors in reducing communal conflict in the last 10 years of decentralized Indonesia, (3) communal conflict are associated with economic inequality, poverty, ethnic diversity and likely occurs in poor regencies rather than in rich regencies, (4) in villages level, key factors of communal conflict are local traditional leaders, community group social capital, slum areas, converted land, mining areas, television, daily crimes, drought, mountainous areas, seaside; (5) relative to year 2008, communal conflict less occured in the years of 2011 and 2014, this means communal conflict may run to decrease.

Keywords: *communal conflict, decentralization, multilevel regression, village level*
